

Supplementary Table S2. Treatment-goal rankings by whether physician judgment was selected at least once

Treatment goal	Physician judgment ≥ 1 time (n=11), mean rank	No physician judgment (n=3), mean rank
Cure	2.27	1.00
Quality of life	2.82	2.33
Symptom relief	3.55	3.00
Whether a permanent stoma would be required	3.45	5.00
Duration of time usual activities could be maintained	4.45	4.67
Treatment-related adverse effects	4.45	5.00

Note. Lower rank values indicate greater importance. The group that never selected physician judgment contained only three participants; these values are descriptive and should not be interpreted as evidence of a group difference.
