

Supplementary Table S4. Sensitivity to inclusion of a combined “I do not know / follow physician judgment” response option

Definition	Participants selecting physician judgment at least once	%
Primary analysis: 10 items with unambiguous physician-judgment option	11/14	78.6
Including the screening-frequency item with combined response category	13/14	92.9

Note. The combined response category could not distinguish uncertainty from reliance on physician judgment and was therefore excluded from the primary analysis.
